Quadratic Function. THREE FORMS OF QUADRATICS. The first form of quadratics is "vertex form" This form will help you to identify the vertex, direction of opening, axis of symmetry (A.O.S), optimal value, and the compression/stretch of the parabola. The

File Type PDF 3 Quadratic Functions Just Another

second form of quadratics is "factored form", this form will help you identify the x-intercepts, direction of opening and from there you work your way through to find the vertex and axis of symmetry (A.O.S).

File Type PDF 3 Quadratic Functions Just Another

Suppose we want to find the equation of the quadratic function $y = ax^2 + bx + c$ which passes through the points $[1, 3]$, $[2, -1]$ and $[4, 1]$. It means we have three equations, one for each of the points – since we know the points given must satisfy the unknown equation. The three equations are (1) $3 = a + b + c$ (2) $-1 = 4$

File Type PDF 3 Quadratic Functions Just Another

WordPress Site
 $5 \times 4 = 20$. The next step is to add these together: $2x^2 + 8x + 5x + 20$ is the same as $2x^2 + 13x + 20$. So the original equation $(2x + 5)(x + 4) = 0$ becomes: $2x^2 + 13x + 20 = 0$. This type of equation is known as a quadratic equation.

consider a variable, say y , whose possible values depend on the value of another variable, say x . In mathematical terms, the dependent variable y represents the value of a function of x . To simplify formulas, it is often useful to use the same symbol for the dependent variable y and the function mapping x onto y .
