This monograph provides a comprehensive survey of the parameters involved in textile washing, in particular the action of detergents. The authors describe the physical and chemical principles of the washing process, as well as the composition, production and action of household and industrial detergents. Furthermore, products and processes in use not only in Europe but also in Japan and the USA are surveyed. A special chapter is devoted to modern methods of detergent analysis. Throughout the book particular emphasis is laid on ecological and toxicological aspects. A discussion of the economic importance of detergents and relevant information about textile types and washing machines complete the book. This publication is not only intended for specialists in industry and academia, it will also give environmental consultants, journalists and other interested readers insight into the complex field of laundry detergents.

The first and only book containing a comprehensive history of washing machines. Included are over 200 color pictures of washers dating from the early 1800s. A description of the many and varied types of machines along with picture examples is given. Also included are discussions on finding antique washers, restoration, patent descriptions, advertising, safety issues and the companies which manufactured washers.

This book examines the development of the English patent system and its relationship with technical change during the period between 1660 and 1800, when the patent system evolved from an instrument of royal patronage into one of commercial competition among the inventors and manufacturers of the Industrial Revolution. It analyses the legal and political framework within which patenting took place and gives an account of the motivations and fortunes of patentees, who obtained patents for a variety of purposes beyond the simple protection of an invention. It includes the first in-depth attempt to gauge the reliability of the patent statistics as a measure of inventive activity and technical change in the early part of the Industrial Revolution, and suggests that the distribution of patents is a better guide to the advance of capitalism than to the centres of inventive activity. It also queries the common assumption that the chief goal of inventors was to save labour, and examines contemporary criticism of the patent system in the light of the changing conceptualisation of invention among natural scientists and

## Download Free Aeg Lavamat Wasmachine Schoonmaken

political economists.

Facilitating the development of important processes that yield increased deterative performance from smaller dosages, this work examines up-to-date and emerging process and chemical technologies used in the formulation of compact powdered detergents. It provides a survey of technological developments fundamental to powder compaction, such as the replacement of traditional phosphate builders and the introduction of insoluble zeolites as particle process aids.

In today's climate there is an increasing requirement for protective textiles, whether for personal protection, protection against the elements, chemical, nuclear or ballistic attack. This comprehensive book brings together the leading protective textiles experts from around the world. It covers a wide variety of themes from materials and design, through protection against specific hazards, to specific applications. This is the first book of its kind to give a complete coverage of textiles for protection. Covers a wide variety of themes from materials and design, through protection against specific hazards, to specific applications The first book of its kind to give a complete coverage of textiles for protection  
Written by leading protective textiles experts from around the world

An introduction to linear time playing. The first section contains basic exercises for linear playing skills: voice coordination, dynamic balance, accenting, and more. The second section deals with the development of time feels in the linear style, including 4/4, half-time, shuffle, and odd meter feels.

Our responses to our thermal environment have a considerable effect on our performance and behavior, not least in the realm of work. There has been considerable scientific investigation of these responses and formal methods have been developed for environmental evaluation and design. In recent years these have been developed to the extent that detailed national and international standards of practice have now become feasible. This new edition of Ken Parson's definitive text brings us back up to date. He covers hot, moderate and cold environments, and defines these in terms of six basic parameters: air temperature, radiate temperature, humidity, air velocity, clothing worn, and the person's activity. There is a focus on the principles and practice of human response, which incorporates psychology, physiology and environmental physics with applied ergonomics. Water requirements, computer modeling and computer-aided design are brought in, as are current standards. Special populations, such as the aged or disabled and specialist environments such as those found in vehicles are also considered. This book continues to be the standard text for the design of environments for humans to live and work safely, comfortably and effectively, and for the design of materials which help the same people cope with their environments.

Promotion of health has become a central feature of health policy at local, national and international levels, forming part of global health initiatives such as those endorsed by the World Health Organisation. The issues examined in *The Sociology of Health Promotion* include sociology of risk, the body, consumption, processes of surveillance and normalisation and considerations relating to race and gender in the implementation of health programmes. It will be invaluable reading for students, health promoters, public health doctors and academics.

This book provides a sociological perspective on fitness culture as developed in commercial gyms, investigating the cultural relevance of gyms in terms of the history of the commercialization of body discipline, the negotiation of gender identities and distinction dynamics within contemporary cultures of consumption.

**The Medical Basis for the Healing Power of Intimacy** We all know that intimacy improves the quality of our lives. Yet most people don't realize how much it can increase the quality of our lives -- our survival. In this New York Timesworld-renowned physician Dean Ornish, M.D., writes, "I am not aware of any other factor in medicine that has a greater impact on our survival than the healing power of love and intimacy. Not diet, not smoking, not exercise, not stress, not genetics, not drugs, not surgery." He reveals that the real epidemic in modern culture is not only physical heart disease but also what he calls spiritual heart disease: loneliness, isolation, alienation, and depression. He shows how the very defenses that we think protect us from emotional pain are often the same ones that actually heighten our pain and threaten our survival. Dr. Ornish outlines eight pathways to intimacy and healing that have made a profound difference in his life and in the life of millions of others in turning sadness into happiness, suffering into joy.
