Pain assessment begins with asking the patient if he has pain. If the answer is yes, perform a thorough pain assessment, including the intensity, quality, location, timing (onset, duration, frequency), symptoms, treatments (prescription and nonprescription), effects on function/daily activities, and what has and has not worked in the past. Merely asking the patient to rate his pain is not enough.

The Safe Patient Handling and Mobility Standards establish a uniform, national foundation for safe patient handling and mobility to prevent injury to healthcare workers and healthcare recipients across the care continuum. These standards outline the role of both the employer and healthcare workers in safe patient handling and mobility. There are eight overarching standards featured in the book, each one outlined and explained in detail: Culture of Safety, Sustainable SPHM Program, Ergonomic Design Principle, SPHM Technology, Education, Training, and Maintaining Competence, Patient-Centered Assessment, Reasonable Accommodation and Post-Injury Return to Work, Comprehensive Evaluation Systems Nurses and all other healthcare workers can use these standards to improve their safe patient handling and mobility programs and optimize safe, high quality patient care.--Page 4 de la couverture.

Reflecting the latest practices in the field, Clinical Decision Making: Case Studies in Medical-Surgical Nursing, 2nd edition bridges the gap between classroom knowledge and clinical application. Emphasizing holistic nursing care, this resource helps nursing students sharpen their critical thinking skills and gain experience applying what they have learned. The more than 40 medical-surgical case histories and related questions, and responses are based on real-life client situations. Every case contains an introductory blueprint of variables that must be considered while evaluating a particular scenario
