All peoples and cultures face environmental issues—but as this accessible text shows, how they respond to such issues varies widely around the world and across human history. Introduction to Cultural Ecology, Third Edition, familiarizes students with the foundations of the field and provides a framework for exploring what other cultures can teach us about human/environment relationships. Drawing on both biological and cultural approaches, the authors first cover basic principles of cultural anthropology, environmental studies, and human biological adaptations to the environment. They then consider environmental concerns within the context of diverse means of making a living, from hunting and gathering to modern industrial societies; detailed case studies add depth and breadth to the discussion.

Ecosystem Management and Sustainability analyzes myriad human-initiated processes and tools developed to foster sustainable natural resource use, preservation, and restoration. It also examines how humans interact with plant, marine, and animal life in both natural and human-altered environments. Experts explain the complex ecosystem relationships that result from invasive species, roads, fencing, and even our homes by addressing topics such as fire and groundwater management, disturbance, and ecosystem resilience. Because most people in the 21st century live in urban environments, the volume pays special attention to the ecology of cities, with detailed coverage on topics ranging from urban agriculture to landscape architecture. The volume focuses on how ecosystems across the world can be restored, maintained, and used productively and sustainably.
