Physics B exam

Chapter 20

The need for long-term energy sources, in particular for our highly technological society, has become increasingly apparent during

Download File

PDF Holt

Physics Chapter 20
the last decade.
One of these
sources, of
tremendous poten-
tial importance,
is controlled
thermonuclear
fusion. The goal
of controlled
thermonuclear
fusion research
is to produce a
high-
temperature,

Download File

PDF Holt

completely
ionized plasma
in which the
nuclei of two
hydrogen
isotopes,
deuterium and
tritium, undergo
enough fusion
reactions so
that the nuclear
energy released
by these fusion
reactions can be

Download File

PDF Holt

Physics
Chapter 20

transformed into heat and electricity with an overall gain in energy. This requires average kinetic energies for the nuclei of the order of 10 keV, corresponding to temperatures of about 100 million degrees.

Download File

PDF Holt

Moreover, the plasma must remain confined for a certain time interval, during which sufficient energy must be produced to heat the plasma, overcome the energy losses and supply heat to the power

Download File

PDF Holt

station. At present, two main approaches are being investigated to achieve these objectives: magnetic confinement and inertial confinement. In magnetic confinement research, a low-

Download File

PDF Holt

density plasma
is heated by
electric
currents,
assisted by
additional
heating methods
such as radio-
frequency
heating or
neutral beam
injection, and
the confinement
is achieved by

Download File

PDF Holt

using various
magnetic field
configurations.

Examples of
these are the
plasmas produced
in stellarator
and tokamak
devices.
