Waves (ANSWER KEY)

A source vibrates up and down and back and forth, causing air molecules to move in a circular motion as the wave is D. A source ejects a ring of high-velocity air molecules that travel from the source to a listener. Explanation:

File Type PDF Longitudinal Waves Gizmo Answers

A sound wave is an example of a longitudinal wave, in which the particle movement is in the same direction as the wave. As a sound source vibrates forward, the molecules next to the source are pushed together, forming a compression.
