Financial Formulas - dummies
The world of finance is literally FULL of mathematical models, formulas, and systems. There's a reason that many word problems in math class involve making change, calculating interest rates, or auditing lemonade stands. There's no avoiding math when it comes to money. Fortunately, most of what the average person needs to know is straightforward. However, it is absolutely necessary to understand certain key concepts in order to be successful financially, whether

Financial Math - Free Math Help
Mathematical finance, also known as quantitative finance and financial mathematics, is a field of applied mathematics, concerned with mathematical modeling of financial markets. Generally, mathematical finance will derive and extend the mathematical or numerical models without necessarily establishing a link to financial theory, taking observed market prices as input.

Mathematical finance - Wikipedia
Financial modeling is the task of building an abstract representation (a model) of a real world financial situation. This is a mathematical model designed to

$f(t,T)=S(t)e^{r(T-t)}$ (6.11) if the stock pays no dividends. The futures prices are random, but this is caused entirely by the randomness of the prices of the underlying asset. If the futures prices depart from the values given by the above formula, it is a reflection of the market's view of future interest rate changes.

Statement In the financial sector, decisions must be made in split seconds that can result in either vast profits or significant losses. The collapse of Lehman Brothers, demonstrated to me the vulnerability of all businesses as the size and level of profit does not matter as poor decisions can still create loss.
