A comprehensive, accurate and rigorous full-colour text for a first course in Biology! This resource presents a balanced integration of concept development, skill development, and biology connections to technology, society, and the environment. The instructional presentation addresses a variety of learning styles while providing content that is in line with the intent and spirit of the university preparation curriculum. Key Features include: Precise parallel to the intent and spirit of the University Preparation curriculum A motivating and effective physical design Over 1,200 in-text practice and review questions Various lab investigations, activities, and exercises

Nelson Biology 11 is a one-of-a-kind hybrid resource that integrates the best features from both Applied and University Preparation resources to ensure success in college preparation courses. Features & Benefits: ? Workbooks help students manage their learning and ultimately stimulate better performance ? Average of 2-3 pages of support material per text section which include organizational supports, Alternative Exercises, and Extension Exercises ? Strong support for reading/comprehension, work habits, and study/organizational skills

Nelson Biology 12 thoroughly equips students with the independent learning, problem-solving, and research skills that are essential to successfully meet the entrance requirements for university 0programs. This resource offers students an opportunity for in-depth study of the concepts and processes associated with biological systems, and balances the teaching and learning of theoretical concepts with concrete applications in the areas of metabolic processes, molecular genetics, homeostasis, evolution, and population dynamics.Features & Benefits: Enhanced Text Design is similar to what students will experience with first-year college/university texts Self-contained and self-explanatory lessons A variety of self-evaluation and self-marking strategies Placement of lab activities at the end of chapters parallels the formal separation of theory and labs in university courses Extension and weblink strategies provide opportunities to hone individual research and study skills A wealth of diagnostic, pre-testing activities Regular practice, assessment, and remediation opportunities Extends the scope and diversity of student learning through web access strategies and digitally rendered program components Ensures seamless articulation with existing Grade 11 Biology resources

Written to the highest achievement standard, this visually engaging series brings Biology to life with clear language and relevant examples. New case studies and Scientific Literacy boxes in every chapter help students to connect with the study of Biology to the real world.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand.We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

CD-ROM includes animations, living graphs, biochemistry in 3D structure tutorials.
