Physical Geography

November 17, 2017. In California there are massive varieties of different landscapes. Within its 163,000 square miles these geographical features and landforms, that have been shaped by plate tectonics and the climate to produce the physical environments that are present today. The area is divided into two separate regions, Southern California and Northern California.

In an El Niño year, air pressure drops over large areas of the central Pacific and along the coast of South America (see Figure 7z-2 below). The normal low pressure system is replaced by a weak high in the western Pacific (the southern oscillation). This change in pressure pattern causes the trade winds to be reduced.
