Power electronics is the application of solid-state electronics to the control and conversion of electric power. The first high power electronic devices were mercury-arc valves. In modern

systems, the conversion is performed with semiconductor switching devices such as diodes, thyristors, and power transistors such as the power MOSFET and IGBT. In contrast to electronic systems concerned with transmission and processing of signals

Power electronics converters are widely used in myriad power conversion

applications from fraction of volt and power to tens of thousands of volts and power levels.

Sometimes it involves multistage power conversion with two or more converters connected in
