The Respiratory System - The UK Online

The cells of the human body require a constant stream of oxygen to stay alive. The respiratory system provides oxygen to the body's cells while removing carbon dioxide, a waste product that can be lethal if allowed to accumulate. There are 3 major parts of the respiratory system: the airway, the lungs, and the muscles of respiration.

Respiratory System | Interactive Anatomy Guide

The respiratory system works closely with the cardiovascular system to maintain a supply of oxygen to the working muscles. How does oxygen get to our muscles? Air passes through the nasal cavity and then on to the trachea. The trachea splits into two tubes called bronchi (each one is called a 'bronchus'), with one going to each lung.
