As they do so, the smaller dune ascends and spreads over the larger one. During this process, however, the fluid flow, which is deflected by the new dune, strongly erodes the front of the dune, which ejects a new dune. Because it is smaller and emerges downstream, the new dune moves faster and a gap opens up between the two dunes," Franklin said.

The Deep Underground Neutrino Experiment (DUNE) is a leading-edge, international experiment for neutrino science and proton decay studies. Discoveries over the past half-century have put neutrinos, the most abundant matter particles in the universe, in the spotlight for further research into several fundamental questions about the nature of matter and the evolution of the universe – questions that DUNE will seek to answer.

Deep Underground Neutrino Experiment

Technology is a key aspect of the fictional setting of the Dune series of science fiction novels written by Frank Herbert, and derivative works. Herbert's concepts and inventions have been analyzed and deconstructed in at least one book, The Science of Dune (2008). Herbert's originating 1965 novel Dune is popularly considered one of the greatest science fiction novels of all time, and is frequently cited as the best-selling science fiction novel in history.
